ENERGY POLICY OF PLASTCHIM-T AD

Plastchim-T AD, Aksakovo Plant is one of the largest BOPP film (biaxially-oriented polypropylene film) manufacturers in Europe. The Company provides to its customers extremely high quality products by continuous automation of its manufacturing process and investing considerable amounts in high-performance and energy efficient machines.

In accordance with its development strategy the organization has implemented Energy Management System in line with the requirements of the standard ISO 50001:2018.

The top management believes that the energy management system is a tool for achieving its strategic goal:

Increasing the competitiveness and the capacity by continual improvement of the energy efficiency, application of a management model focused on the efficient use of the energy resources, encouraging the uptake of innovative energy-saving technologies, equipment and processes.

Our efforts are directed to:

- Increased energy efficiency with positive financial results;
- Sustainable average annual rate of reduced energy consumption;
- Lower energy cost per unit of product;
- Energy resource saving.

The sustainability and the economy in managing the processes of the energy management system form the basis for achievement of our objectives.

In order to achieve the objectives of the organization the top management assumes personal responsibility for efficient functioning of the energy management system and the obligation to ensure:

“ This document was created with the financial support from the Operational Programme "Innovations and Competitiveness 2014-2020", funded by the European Union through the European Regional Development Fund. The sole responsibility for the content of the document lies with "Plastchim-T AD and under no circumstances can be assumed that this document reflects the official position of the European Union and the Managing Authority.”

- Constant conformity of the energy management policy and the associated objectives;
- A mechanism for setting and review of the general and specific energy objectives, development of plans for achievement of the objectives and evaluation of the results;
- Compliance with the applicable legal and other requirements, related to the energy management system;
- Ensuring the necessary resources and information for fulfillment of the energy objectives;
- Purchase and use of energy efficient products and services;
- Regularly conducting energy audits and defining measures for improvement of the energy characteristics;
- Maintenance of the competency, awareness and motivation of the personnel, engaged with the energy management at the required level;
- Introduction of new products, services and processes by preliminary assessment of the energy efficiency;
- Modernization, automation and optimization of the manufacturing processes, aimed at energy saving and increasing the energy efficiency and competitiveness;
- Annual planning of measures for improvement and evaluation of the results;
- Planning of energy data, subject to control, monitoring, measurement and assessment.

In order to implement the present policy the top management supports all interested persons within the framework of the energy management system by:

- Encouraging the proposals on improvements and the innovations;
- Dissemination, explanation and discussion of the energy objectives and policy;
- Regularly reviewing and updating the energy policy upon occurrence of new circumstances and requirements.

I, acting as an Executive Director of **PLASTCHIM-T AD**, hereby declare my personal participation and responsibility for implementation of the announced energy policy.
