

Four point big bags

This type of packaging is used for storage and transportation of construction materials and seed.

The big bags are sewn, made of UV stabilized polypropylene sleeve fabric, uncoated and coated. They can be equipped with a polyethylene liners. They are packed and pressed on a pallet.

We produce four-point big bags, with belts sewn in the corners.

* Single-trip (SF 5: 1) - designed for single use.

* Load capacity (SWL) from 300 to 1500 kg

Big bags are certified in international laboratories, according to the relevant standards.

Width of the fabric, cm	Outer square base dimensions, cm	Inner square base dimensions, cm	Diameter after filling, cm	Min bag length (min L), cm	Max bag length (max-L), cm
180	90x90	86x86	115	100	210
190	95x95	91x91	120	100	220
200	100x100	96x96	125	100	220
210	105x105	101x101	130	100	220

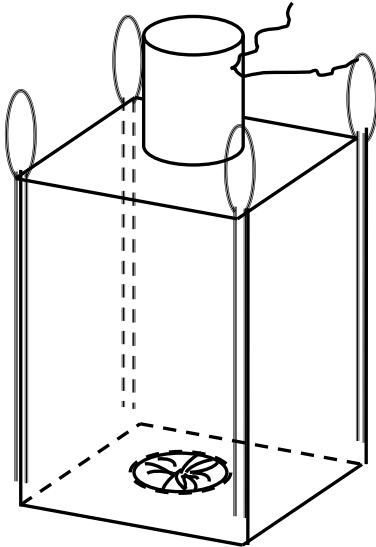

1. Depending on the way of filling, we produce the following types of packaging:

- * four-points, open at the top
- * four points with filling spout
- * four-points with skirt

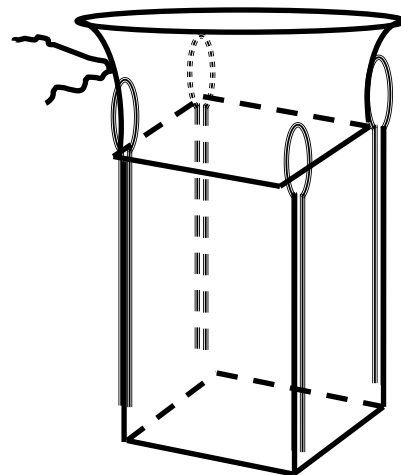

2. According to the type of bottom:

- * Closed bottom
- * Discharging spout

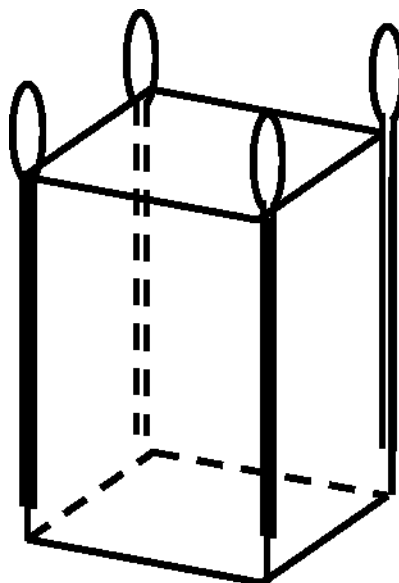

**4 loop bag with filling spout and
discharging spout**

4 loop bag with close bottom and skirt

4 loop bag closed bottom, open top

At the customer's request we can produce a different combination of filling and emptying systems. Big bags can also be completed with PE liners - fixed to the outer bag or free inserted.
