

FOOD SAFETY POLICY

The policy of Plastchim-T AD aims to prevent any danger to human life and health that our products may cause. This means that everyone in the company – like the functional and production units and every individual employee - understand the food safety requirements and achieve product quality that meets these requirements.

Our activity is focused on risk analysis and food safety management at every stage of the production and delivery of our products.

Recognizing the fact that the staff is the main leading factor in food safety management, we strive to provide an adequate working environment that ensures the necessary conditions for knowledge and compliance with all hygiene requirements.

We understand our place in the food chain and we are committed to complying with all applicable regulatory requirements regarding safety, hygiene, protection against counterfeiting and food fraud.

We believe that the constantly improving food safety management system is the right way to win more and more trust from our customers and final consumers.
